

# ShrinkPak5000

The ShrinkPak5000 applies plastic wrap to packages of bottles and covers them through the heat tunnel. The controlled heat process securely shrinks the plastic around the case, securing the product within the case. Six, 12, and 24-bottle shrink wrapped packages are tamper-evident and protected from dust and abrasions. Polyethylene film is used with the Norland ShrinkPak5000 to wrap nearly any beverage package with controlled heat. This unique approach dramatically reduces packaging costs, saving up to 70% of the cost of traditional corrugated material. Simplify your packaging day, and save money with the ShrinkPak5000.

# ShrinkPak5000

## General Specifications

- Packaging up to 5.5 cases per minute
- PLC interface display with digital controls
- Manual or automatic bottle loading options
- Precision loading and unloading bottle counters

## Additional Features

- Can package virtually any shape or size of package
- Composed of Air Compressor, Air Drier, Feed Conveyor, Shrink Wrap Table and Heat Tunnel
- Polyethylene film seals package from debris

## Your Complete Package
